

KATIE FULLMER

designer & developer

ABOUT

With over a decade of experience, I specialize in product design for complex, multi-platform solutions, leading end-to-end delivery from discovery through implementation. I work across a wide range of technologies, delivering engaging interfaces that prioritize user experience, accessibility, performance, and functionality.

I operate at the intersection of craft and strategy: shaping client relationships, influencing roadmaps, and championing accessibility and UX standards across solutions. Over the years I have enjoyed working in cross-functional settings, collaborating closely with PMs, engineers, and clients to turn ambiguous requirements into scalable, polished products.

I bring curiosity and passion to every project, constantly exploring new tools and methods to close the gap between design and implementation.

Baton Rouge, Louisiana

MINOR IN ART HISTORY / 2008 - 2012
Louisiana State University
Baton Rouge, Louisiana

EXPERIENCE

LEAGUE / AUG 2025 - PRESENT
Senior Product Designer

- Responsible for leading workshops to help define problems and craft solutions with our partners in healthcare and the consumers who need them.
- Involved in the full life-cycle of customer solution designs, bringing a user-focused lens to complement the customer's business objectives.
- Work with customers to understand requirements and develop designs for custom features that align with business and user objectives, creating a unique experience for their members.
- Partner with the Design Research team to drive or contribute to research that will improve our understanding of the customer's target user and/or market in order to develop a more effective solution.
- Own all design deliverables for assigned customer apps, from IA and high level flows through lo, mid, and hi-fidelity designs for "out of the box" solutions and solutions that incorporate custom functionality.
- Contribute to team initiatives around improving work processes, collaboration opportunities, and culture, continually reflecting on what is working and what opportunities exist.

HEALTH CONNECTIVE / JUN 2012 - JUL 2025
Senior UX Designer & Front End Developer

- Provide interactive prototypes, high-fidelity designs, and custom application development for medtech companies and various orthopedic and neuro medical practices.
- Evolve and maintain design system libraries, creating new components and scaling existing assets with the latest features in Figma.
- Ensure projects meet WCAG 2.1 AA standards by advocating for inclusive design best practices.
- Foster professional growth of junior designers, providing feedback and opportunities for collaboration.
- Convey design ideas and solutions to peers, clients, and stakeholders in weekly meetings.
